

Sources for Web Filtering Software with comments from their web pages

K9 Blue Coat -With K9, you can decide which neighborhoods are OK to visit, and which ones aren't. That ability makes a big difference when you're trying to provide a safe environment for children. K9 makes it easier to let your children explore and learn on the Internet, while you do what you can to keep them safe.

Naomi -An advanced internet filtering program, easy to use and totally free, intended for families, and kids in particular. Naomi is able to constantly monitor all internet connections, protecting children from inappropriate online material - such as obscene or violent contents; pornography, pedophilia and erotism in the form of images or texts; sites that popularize drugs; gambling games; terrorism; hate propaganda; occultism; sects; blasphemy, etc.

ICRA Filiter -ICRA*plus* is more than just another internet filter. It is the foundation that allows you to select and combine several filters to produce the precise solution you're looking for.

Naturally ICRA*plus* fully supports ICRA's self-labelling system and will effectively allow or block access to labelled sites according to your settings. However, it can **also** work with additional filters to block or allow websites based on a whole variety of different sources of information, whether the site is labelled or not. Therefore for enhanced functionality you are advised to install one or more of the optional modules. These are created by companies and organizations that are independent of ICRA and that may charge for their software.

Weblocker -When We-Blocker installs, it utilizes a special feature called **word filtering**. Word filtering checks the words within a web page you requested, and sees if there are any that match its list of "bad" words. If it finds a match, the word filter will prevent the page from loading.

avast Home Edition -A full-featured antivirus package designed exclusively for home users *and* non-commercial use. **Both** of these conditions should be met! Our company offers the Home Edition free of charge, since, in our opinion, it is possible to avoid global virus spreading by efficient prevention; however, many users are not able to or do not want to pay for antivirus software.
